- **Radek** *(Discord user name **Soulse**)*.

PROJECT DESCRIPTION

The goal of this simple project is to give users the capability of viewing products that are available on the store. Next big thing is allowing users to select products (clothes) to purchase, adding items to the basket and finally viewing purchase information.

A must do points:

- Landing page with a few advertisements' banners,
- Responsive Menu for large and small screens,
- Data that contains products information will be loaded from external API,
- Details page for each product,
- Basket with ordered items,
- Sorting and filtering products.

User Interaction:

- User can click on the menu and select what item category he/she wants to see,

- User can see Details Page (cart Page) for each Product showing a price, name, description, quantity, and picture of it,

- User can click a Place Order button on the Shopping Cart Page to finish the order. Confirmation number will be shown when order is placed.

- User can click a Cancel order to quit from current order,

- User can click a Continue Shopping to come back to main page and select more items to purchase,

- User can pick up the right quantity of the ordered item,

- User can see during shopping whether his "Shopping Card" is empty,
